

Profiling Linguistic Disability

Profiling has been acknowledged as a major contribution to the treatment of language disorder. First developed with reference to grammatical disability, profiling is extended in this book to cover segmental phonology, prosody and semantics. The book also includes a revised version of the grammatical profiling procedure, LARSP. For this second edition of the book all the existing material has been updated. In addition there is a new chapter, entitled Putting Profiles into Practice, which contains extracts from case studies and several guidelines for teaching and therapy.
