The Different Forms of Flowers on Plants of the Same Species (Annotated)

\*This Book is annotated (it contains a detailed biography of the author). active Table of Contents has been added by the publisher for a better customer experience. \*This book has been checked and corrected for spelling errors. Different Forms of Flowers on Plants of the Same Species is a book by Charles Darwin first published in 1877. It is the fifth of his six books devoted solely to the study of plants. These writings contributed to Darwins pursuit of evidence that would support his theory of natural selection. There were only two more books to follow: The Power of Movement in Plants (1880) and The Formation of Vegetable Mould through the Action of Worms (1881). He conducted a wide range of experiments and observations and the results of these form the framework of the book. He was assisted in this work by his son, Francis Darwin.
